Object: REACH –COMPLIANCE

We do hereby confirm the compliance to the REACH Regulation for the substances contained in our supplied products.

We want to make it clear, that per the recovery's industry, an actual registration of the recovered substances will not be provided if any other legal entity proceeds with the registration (art. 2, 7, d)).

We have also encouraged our suppliers to proceed with the registration of their substances and suggested they confirm their submissions.

We want to stress that our finished-products such as: bars, wire rods, coils, flats, angle bars, etc. are defined as articles without intentional release of substances (art. 7 REACH) and consequently they are outside the scope of the REACH Regulation.

In addition, our articles do not contain any SVHC substances in a concentration above 0,1 % weight by weight (w/w), as listed into the Candidate List (http://echa.europa.eu/chem_data/authorisation_process/candidate_list_table_en.asp).

We will keep the market up to date about any possible use of SVHC substances, not currently included into the Candidate List, which could be included during future revisions. It is a legal obligation to inform you as soon as a substance classified as SVHC is present in a concentration above 0,1 % weight by weight (w/w) in some articles produced by Acciaierie Valbruna SpA.

Although some steel semi-finished products may be considered 'preparations', these preparations would consist of recovered substances, neither produced nor imported by Acciaierie Valbruna SpA.

All further obligations required by the REACH Regulation will be completed by Acciaierie Valbruna SpA within the required time frames.

Please contact us if you require further information.

Best regards

Acciaierie Valbruna S.p.A.
